

The recessed luminaire family is wide and varied: the recessed luminaires with outer profile and flush edge without outer profile can accommodate one to four lamps; the recessed luminaires with optical assemblies can stand out from the box thanks to a telescopic bayonet which allows to take out the optical component and therefore provides high adjustability – over 90° both horizontally and vertically; the recessed luminaires with mixed light are a very interesting solution from the functional and appearance standpoints, combining discharge lamps and very low halogen lamps.

Light sources

The light sources used for recessed solutions are: very low voltage halogen lamps (100 W max 12V G53); discharge lamps (35-70-150 W G12, 70 W CDM-R - E27) and fluorescent lamps (36 W 2G11).

Adjustable recessed luminaire for very low voltage halogen lamps (12V).
Anodised extruded aluminium structure, die-cast aluminium optical assembly.
Separate power supply: 12V (halogen lamps).
Ballast not included.
